

Established in 2015, su-re.co (Sustainability and Resilience.co) created a **sustainable and resilient community** (be) that can turn **goodwill and deep thought** (think) directly into **meaningful action** (do).

Our mission is to be a **gift-maker** delivering sustainable meaning in scientific knowledge (think), craft (do), and ourselves (be) hence we believe in the values of **think sustainable, do sustainable and be sustainable.**

Another Gift for Farmers in Plaga, Bali

In early March 2020, Vincent and Jeroen of su-re.co delivered a gift for farmers in Plaga. By implementing the instruction from our team and assisted by Pak Slamet who has experience in installing biogas digester, they all successfully installed the biogas themselves.

Lapmas for supporting this biogas. In total, we have created more than 20 biogas digester! Before installing biogas digester in this village,...(see next page)

Did you know?

Food Security and Climate Change

If current income and consumption growth trends continue, there must be a 60% agricultural production increase to fulfill the demand for food by 2050. If we still work on the business-as-usual scenario, climate change will make this goal more difficult (FAO, 2013).

Indonesia-Sweden Policy Dialogue on Bioenergy

To strengthen the diplomatic relations between Indonesia and Sweden, a policy dialogue on bioenergy was conducted on March 11, 2020 in Jakarta. Our CEO, Takeshi Takama attended this event to present our previous research on bioenergy and got the chance to interview some key persons including the Indonesia-Sweden ambassador, Maria Berg. In our work, we have also built a relationship with a global think-tank organization, and a Swedish-based organization - Stockholm Environment Institute.

Join the Gift Maker Program

Stay productive and make an impact from your home! This year, su-re.co launches an online internship program so everyone from all over the world can join us to make a change together. Distance will not be a matter as technology makes our work easier.

Be part of our team by taking an online internship! Check out our website : su-re.co/internship

Students from the Tokyo University Explore Balinese Culture and Sustainability Issues

Early March 2020, we had 7 students from Tokyo University visit Bali to learn about sustainability issues faced by this island. Through small research projects, they were given two main topics that are waste management and agriculture.

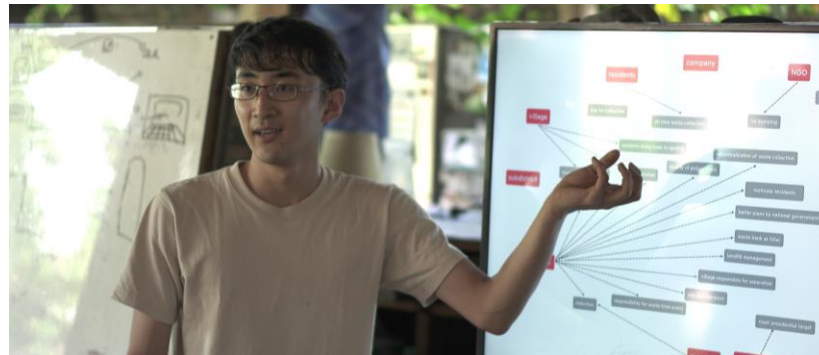

They worked together in two teams to observe and understand the waste management and agricultural system in Bali. They met and spoke with the locals to gather data and information they needed for their projects.

Besides conducting research, they also got the chance to experience some of the Balinese culture, the Mekotek Festival in Munggu Village. You can find this event every Kuningan (twice a year) in this village!

To support this event, the students took their trash bags and started picking up plastic waste around the festival.

By the end of the program, each team presented their analysis, lessons learned and shared their creative ideas on how to solve those problems. We believe the young generations like them can give an impactful contribution for our environment.

Do you want to know more about their journey in Bali? Watch the video on our YouTube: [su-re.co](https://www.youtube.com/su-re.co).

Another Gift for Farmer in Plaga, Bali

(Continued from front page)

su-re.co has built the capacity of farmers through Climate Field Schools in collaboration with SEI, BMKG and DiBon Coffee Project. Pak Slamet, who was leading the biogas installation, was the first farmer we met in Bon Village. He is also the lead farmer of DiBon Coffee Project. "The system is interesting, really practical and inexpensive to be implemented in our farm and the surrounding farms," said Yuki of DiBon Coffee Project.
